

Implementation of National Framework for Climate Services in Cameroon

POKAM MBA Wilfried
University of Yaoundé 1, Yaoundé, Cameroon

Cameroon National Framework For Climate Service (NFCS)

Develop platform linking climate information providers and users, to facilitate the development and delivery of climate services tailored to end user needs.

Steps of implementation

Main challenges for implementation of NFCS

Policy

- Weak integration of climate services in national development programs
- National policy on provision and delivery of climate services not clear

Capacity

- Poor observation network, Low accurate data
- Low human resources capital in development of climate products

Network

- Lack of collaborative platform between climate information providers and users

Where are we now?

- Meeting for NFCS have developed discussion between actors
- Increase discussion between institutions (providers/users)
- Dialogue between institution to fill the gap on unclear legislation for delivering climate services
- Ongoing elaboration of technical manual for collaboration of institutions involved on climate information delivery
- Recruitment at the Meteorological Service
- Strengthening of observation network since 2013

National plan for implementation of NFCS already revised and waiting for the final for approval

Next steps

- Elaboration of agreement between institution to strengthen the collaboration on climate information
- Recruitment at the Meteorological Service
- National plan for implementation of NFCS already revised and waiting for the final for approval
